[Using Namespace Std In Dev C.](#)

---

In C++, namespaces are simply named scopes of code, most commonly used to prevent naming conflicts.. namespace using the scope resolution operator - e g std::cout and std::endl. This line brings the namespace into the scope where the using statement is written, and as such we usually bring everything from the 'std' namespace into a global scope so that we don't have to manually scope out each instance of cout, endl, or other things that use the std Electrax 2 vst download crack.
